

# Biocult

## Content

- |  |                           |            |
|--|---------------------------|------------|
| • 3 Species of in vivo produced Endo-Mycorrhizae | 160 propagules/g          | (4.1% w/w) |
| • <i>Trichoderma asperellum</i>                  | 7.5x10 <sup>6</sup> CFU/g | (7.5% w/w) |

## Application & positioning

- Consult the label for the application on a specific crop.
- 3.5 – 7 oz/ac once or twice a season.
- Compatible with many agrochemicals.
- Soil drench, in-furrow application, seed treatment, through the irrigation.

## Benefits of Biocult

- Nutrient solubilisation and uptake.
- Drought tolerance and improved water availability.
- Salinity and heavy metal tolerance.
- Earlier fruit/grain set which gives more time to bulk up crop yield.
- Improved soil organic matter and carbon sequestration.
- Improved soil biodiversity and soil health.
